Project Objective (Business Understanding)

Project Objective:

- To identify lucrative film types in order to guide decisions for a new movie studio.

Business Questions:

- Which genres generate the highest revenue and ROI?
- How does the production budget impact profitability?
- What is the relationship between critical acclaim (IMDB ratings) and box office success?
- Which established studios currently dominate the market?

Data Sources

Data Used:

- IMDB (SQLite): genres, ratings, votes
- The Numbers: production budgets
- Box Office Mojo: worldwide gross revenue

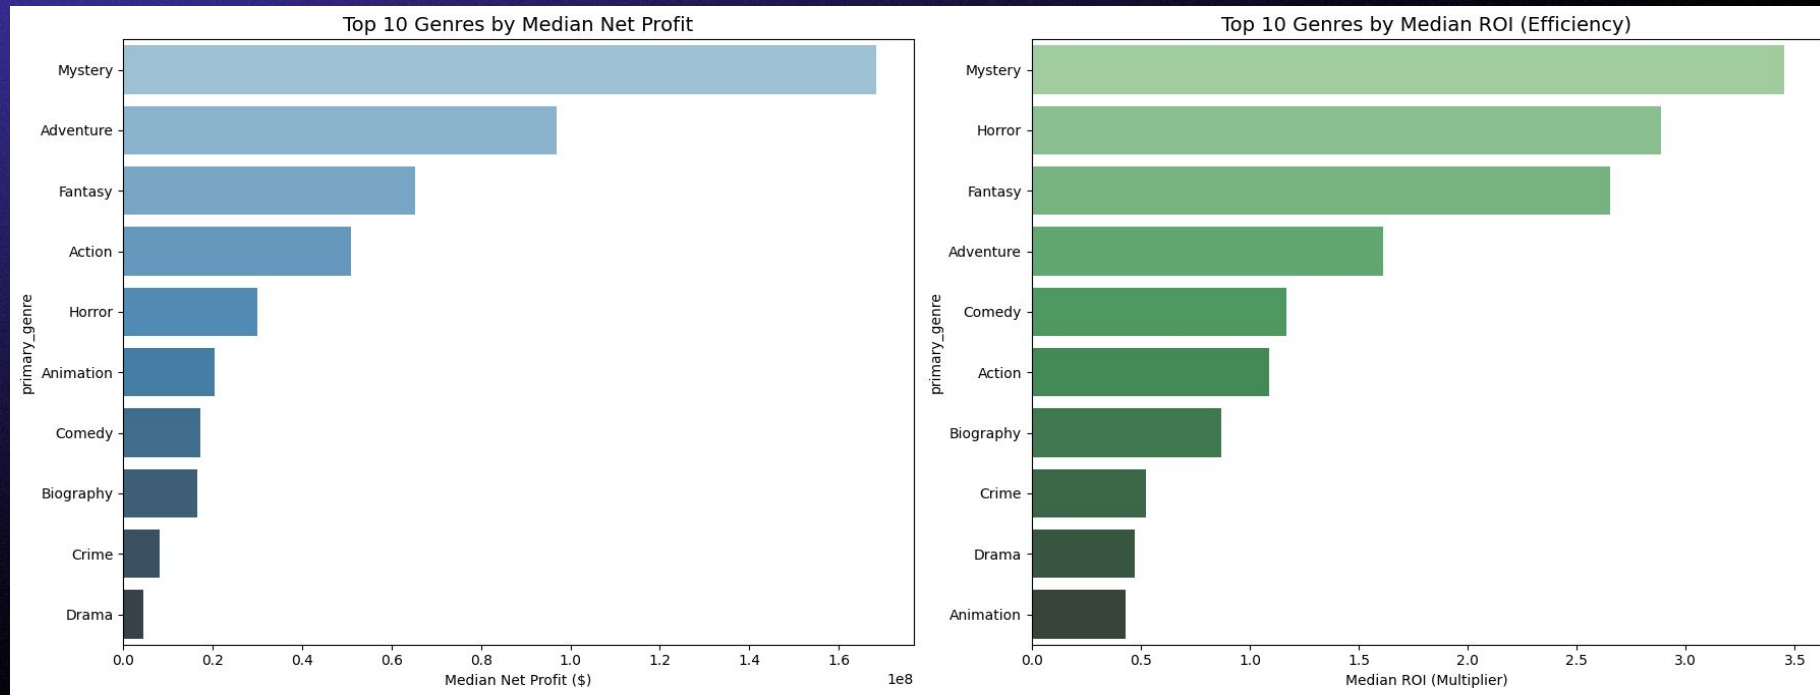

Methodology (CRISP-DM)

Analytical Approach:

- Data cleaning and merging
- Feature engineering (profit, ROI, budget tiers)
- Exploratory analysis using visualizations
- Translation of findings into business recommendations

Analysis and Visuals

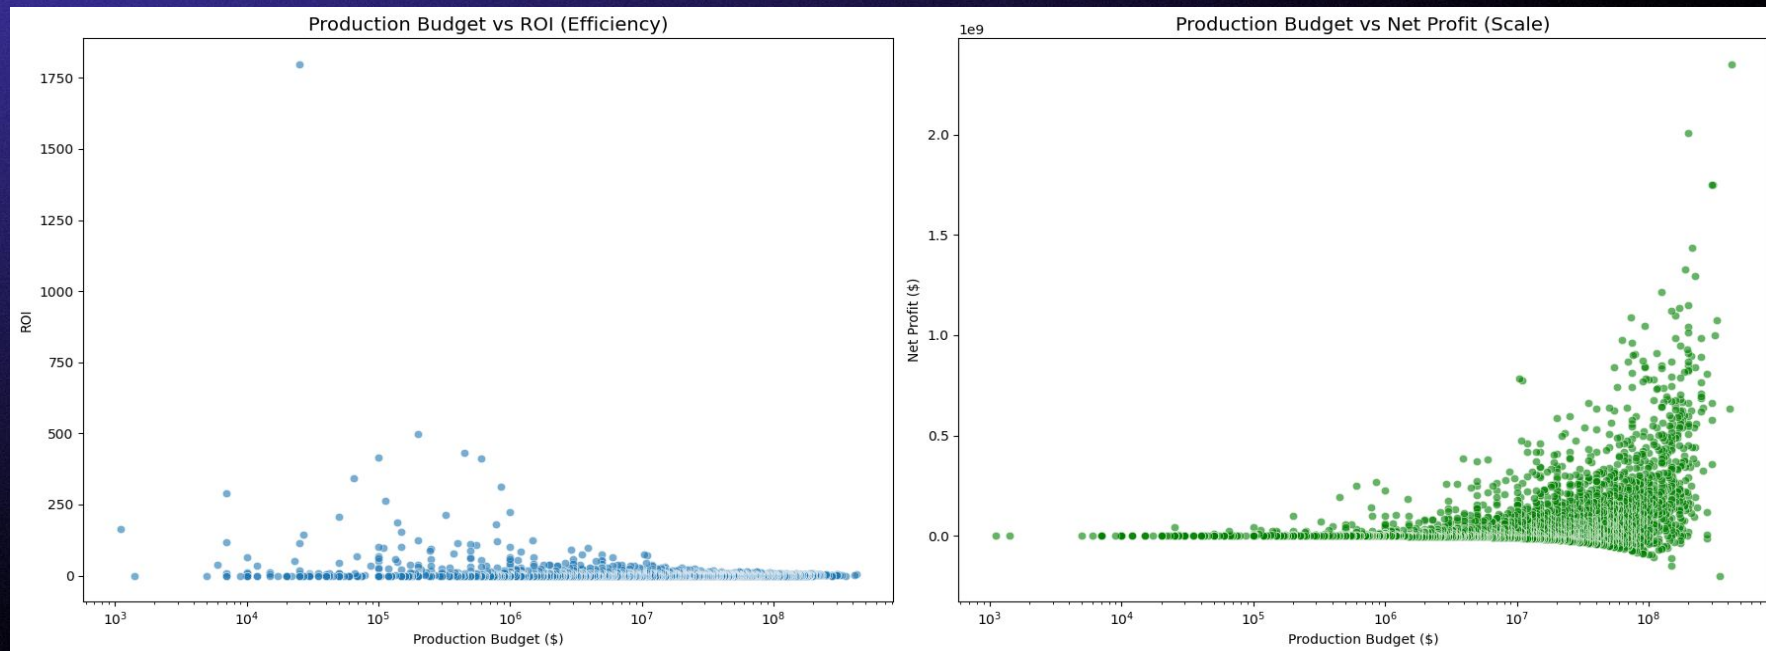

Net Profit & ROI by Genre

Key Findings:

- *High ROI does not always guarantee highest profits.*
- *Mystery led in both median Net Profit and median ROI.*

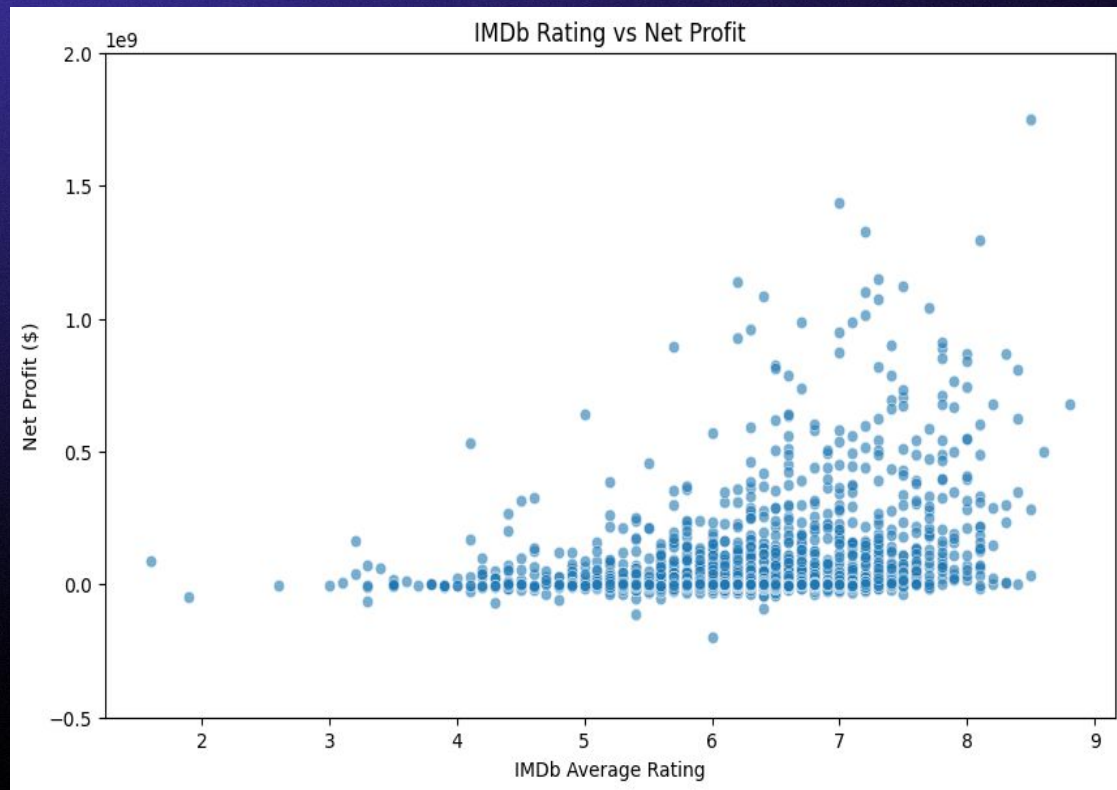

Production Budget vs ROI & Net Profit

Key Finding:

- *Movies that dominate high profits do not dominate high ROI. This suggests that large studios benefit from scale, while small studios achieve efficiency with low-budget genre films.*

IMDB Rating vs Net Profit

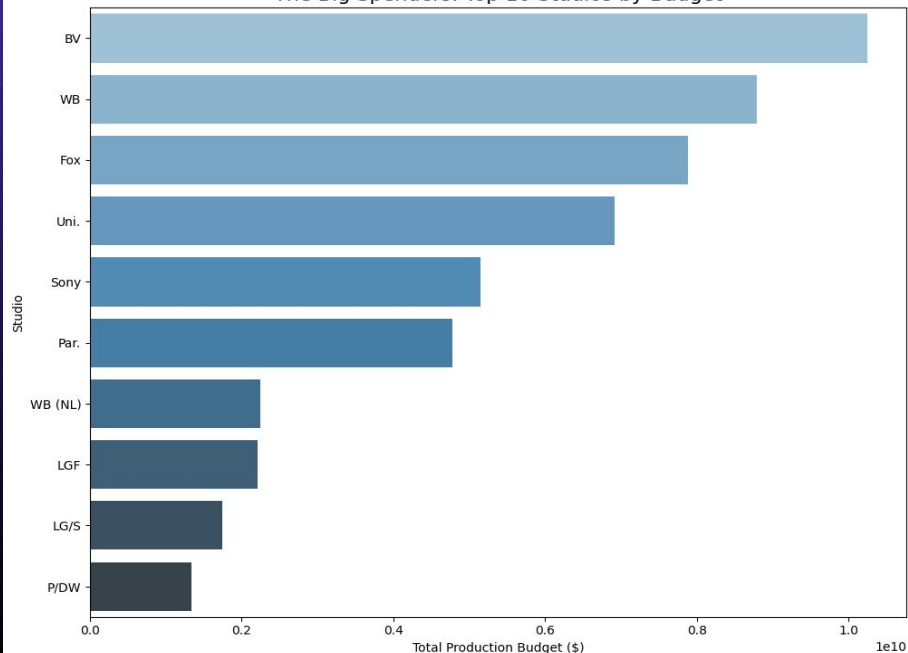

Key Findings:

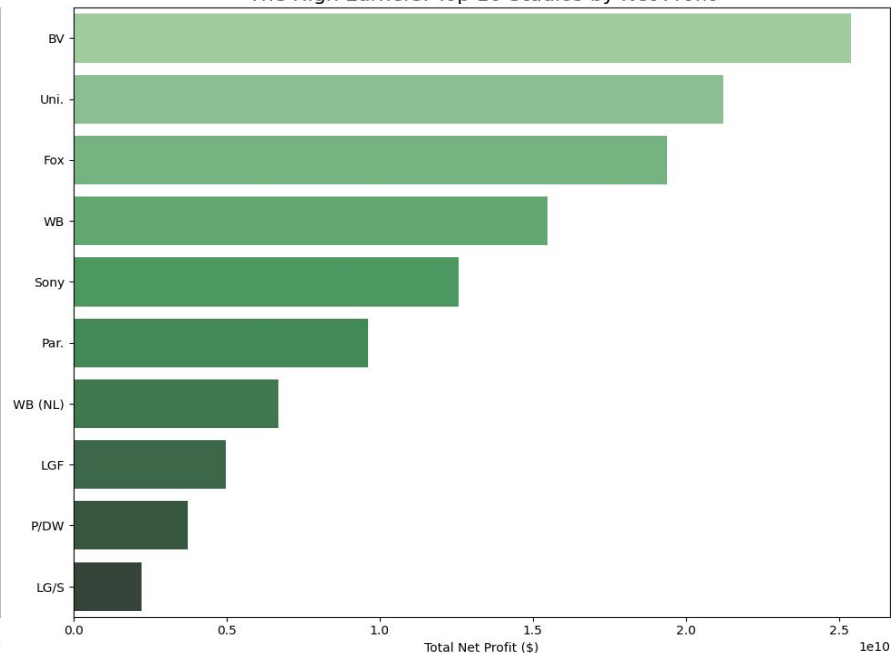

- *Even highly profitable films fall outside of IMDb's highest ratings.*
- *Critical acclaim is not a prerequisite for box office success, however successful movies clustered within the range 6.5 - 8.5*

Top studios by Production Budget and Net Profit

The Big Spenders: Top 10 Studios by Budget

The High Earners: Top 10 Studios by Net Profit

Key Findings:

- *Nine of the big spenders make it into the high earners list*
- *Buena Vista (BV) dominate box office revenue, reflecting the advantage of established franchises.*

Recommendations and Conclusion

Business Recommendations:

- *Launch with low-budget Horror & Mystery titles to maximize ROI and minimize downside risk*
- *Transition to mid-to-high budget Action to capture massive net profit.*
- *Collaborate with established leaders (e.g., Buena Vista) on major projects to leverage their funding, resources, and global distribution.*

Conclusion:

- *By balancing Efficiency (ROI) with Scale (Net Profit), we minimize initial exposure while building a roadmap for long-term commercial dominance.*
